

Cyber Resilience Solutions

Contain the attack. Recover your data. Stay in business.

If an attacker got into your systems right now, how long would it take you to notice and stop them? And if you lost critical data tomorrow, whether from an attack, human error, or a misconfigured setting, how confident are you it would come back?

Two different risks, two purpose-built answers:

BullWall for real-time threat containment, and **Keepit** for independent, always-recoverable data backup.

TWO LAYERS OF RESILIENCE

STEP 1 — CONTAIN

BullWall

Ransomware Containment

- ✓ Detects active encryption in milliseconds - at the data layer, not the endpoint
- ✓ Automatically isolates compromised users/devices before damage spreads
- ✓ Works where EDR often fails over 99% of simulated attacks bypassed EDR in BullWall pentests
- ✓ Generates audit-ready compliance evidence (GDPR, NIS2, DORA, cyber insurance)

STEP 2 — RECOVER

Keepit

SaaS Backup & Recovery

- ✓ Backup data stored independently of M365/Azure - out of reach if your tenant is compromised
- ✓ Structural, always-on immutability - not a setting that can be misconfigured
- ✓ SaaS apps covered: Microsoft 365, Entra ID, Google Workspace, Salesforce and more
- ✓ Fast, guided recovery - point-in-time and item-level restore, minimal admin effort

WHY FRCI ?

As a global Microsoft partner with 35+ years of experience across Mauritius, Africa, Australia and Europe, FRCI provides the full journey from consulting, design, deployment and support. Uniting containment and recovery under one trusted expert.
